CAMBRIDGE 9618

AS Computer Science explained step by step

A detailed student handbook for the 2027-2029 AS syllabus, with clear explanations, real-world examples and guided practice across both written papers.

PAPER 1 / THEORY FUNDAMENTALS

Understand data representation, networks, hardware, processors, system software, security, ethics and databases. Follow labelled diagrams and worked calculations that explain how the ideas connect.

PAPER 2 / PROBLEM SOLVING AND PROGRAMMING

Build algorithms using worked pseudocode, trace tables and practical scenarios. Practise selection, loops, arrays, records, files, searching, sorting, procedures and functions, then test and improve your solutions.
